Dear Parents

A green environment is the road to a healthy life. Plants nurture growth, vitality and purity in the environment, thus enabling us to enhance our standard of living.

Kerala faced one of the worst floods recently, leading to massive destruction and apathy. One of the many causes that lead to this almost man made calamity, has been excessive mining, construction of high rise buildings, thus resulting in intense deforestation. Extreme rainfall and human intervention have turned it into a serious disaster.

It is indeed time that we take stock of our surroundings and guide our students, the youth of future, to take charge.

Keeping this view in mind, we at DPS Rohini are beginning '**Green Initiative**', wherein we plan to engage our young learners in various activities with a focus on inculcation of a deep sense of responsibility towards our environment.

Each student is being given **two seeds in a small pouch**. Please encourage your ward to do the following:

- Guide your child in looking for an appropriate spot where she/he can sow the seeds.
- Facilitate proper care of the seed as it nurtures into a sapling through constant supervision.
- Encourage your ward to view its growth and enjoy the development of the plant.
- Let him or her celebrate the sapling's first month's birthday and so on.
- Encourage your ward to click pictures of the plant as it grows.
- Record the various stages of its growth such as colour, length, number of leaves, etc. in a scrape file.
- Please send the findings to the EVS teacher periodically.

Let us give a chance to our children to be creators and feel the moment the one comes interface with on 'Creating Life'.

Looking forward to your whole hearted support.
